Flashcards

1. What is the definition of continued proportion for quantities a, b, c?

a/b = b/c

2. In a continued proportion a, b, c, what is 'b' called?

The mean proportional between a and c.

3. In a continued proportion a, b, c, what is 'a' called?

The first proportional.

4. In a continued proportion a, b, c, what is 'c' called?

The third proportional.

5. What is the formula for the mean proportional 'b' between 'a' and 'c'?

b = ± sqrt(a * c)

6. Are the numbers 4, 6, 9 in continued proportion? Why?

Yes, because 4/6 = 6/9 (both equal 2/3).

7. Are the numbers 15, 12, 10 in continued proportion? Why?

No, because 15/12 ≠ 12/10.

8. If a/b = b/c = k, what is the relationship between 'a' and 'c'?

a = c * k^2
